

2011 SJV Well Drilling Program

Bakersfield, California

Client: Plains Exploration and Production Company

DPSI was selected by Plains Exploration and Production Company (PXP) to perform construction management services for their 2011 SJV Well Drilling Program.

DPSI's scope of work included management of:

- Well location layout
- Well location construction
- Existing line relocation (mechanical and electrical)
- Trunk lines installation (steam, flow, gas)
- Setting of pumping units and hook-ups
- Installation of facilities including well headers and bypasses
- Budget/schedule review and maintenance
- Project closeout review

In order to complete this work successfully, DPSI worked closely with PXP's facility engineers, drilling engineers, operations staff, construction management staff, and contractors to plan and execute this program.
