

API 14C Safety Systems Compliance Review

Beta Offshore Production Complex, Long Beach, California

Client: Beta Offshore

In an effort to comply with API RP 14C, Beta Offshore requested the assistance of DPSI to review Platform Elly to determine its level of compliance and provide an updated summary with recommendations.

API RP 14C, published by the American Petroleum Institute, specifies the requirements for the analysis, design, installation, and testing of surface safety systems for offshore production platforms and is mandated by regulatory requirements.

DPSI's scope of work included:

- Review of facility safety systems for API 14C Compliance
- Review and update as needed all PSV sizing calculations and provide calculation spreadsheets
- Review and update as needed all P&IDs and Safe Charts
- Provide a Summary of Findings with recommendations
- Coordination of work needed to address recommendations

All work was done in compliance with API RP 14C requirements.
