

Subsea Pipeline Replacement

Beta Offshore Production Complex, Long Beach, California
Client: Beta Offshore

Beta Offshore intends to replace two intrafield pipelines running between platforms Elly and Eureka. This effort will allow reintroduction of water injection and increased production from Platform Eureka.

The project involves:

- Replacement of abandoned 12" gross fluids pipeline
- Replacement of 10" water return pipeline that is near the end of its usable life
- Return the existing 6" pipeline back to gas service

The scope of work includes:

- Development of preliminary engineering packages, estimates, and Authorities for Expenditure (AFEs)
- Compile project execution plans by integrating components from all sub consultants and contractors for submittal to permitting agencies
- Management of all engineering disciplines
- Management support for on-site construction activities
- Cost and schedule reporting
