

Topside Structural Corrosion Prevention Program

Beta Offshore Field Facilities, Long Beach, California

Client: Beta Offshore

The three offshore platforms, Elly, Ellen and Eureka are subject to the corrosion management, prevention, and maintenance requirements of the Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE).

This ongoing project includes:

- Evaluation of the previous operator's corrosion prevention program
- Development of a new annual structural and mechanical system corrosion inspection program

The new and improved program meets BOEMRE requirements for Platforms Elly and Ellen, and now includes Platform Eureka as well.

DPSI is assisting the client in the implementation of the plan for each of the three platforms, as well as providing qualified NDE Inspection Teams to verify the integrity of various "critical" piping systems.
